

# Best Aviation Safety Equipment Provider - The Americas

**Phoenix Agritech (Canada) Ltd specialises in developing new and improved electronic bird deterrents using the latest technology. We profile the firm to learn more about the solutions it provides.**

Established in 1991, Phoenix Agritech designs and develops innovative systems designed to deter birds from areas where they are a nuisance, or can be hazardous. Around 60% of the firm's market is involved with agriculture, horticulture and viticulture, where birds eat crops such as grapes, cherries etc. An additional 15% of the company's systems go to industrial clients to deter birds from such places as building rooves, or polluted tailings ponds etc.

The remaining 25% of the firm's production is for airports to deter birds from the runways where they can be hazardous to aircraft. Bird-strikes to aircraft can be lethal when birds get ingested into jet engines, entangled in wing flaps or collide directly with a plane, especially during landing or take-off.

As such, the Phoenix Airport Runway Bird Deterrent System is located beside the runway emitting ever changing natural sound sequences across and above the ground. These sounds are specific to the bird species which are indigenous to, or have caused problems at each airport equipped with the Phoenix system. i.e. It is site specific, aiming to create a bird-free zone.

Phoenix Agritech is located in Atlantic Canada, which is a perfect location to be for accessing North America and Europe. Halifax International Airport has had 7 Phoenix Airport Wailer systems beside the runways since 1993. Other airports equipped with these creative systems are St.John's, Regina, Grande Prairie, San Francisco and others. The firm has also designed and supplied systems for helipads on land and for oil platforms.

Overall, Phoenix Agritech has supplied its runway bird deterrent systems to many countries around the world., and moving forward the firm will continue to supply these dynamic and vital solutions to airports and other clients in order to meet their needs.
